

Orbital Transports

Aerospace or Electrical or Mechanical Engineer Intern

Orbital Transports is a space logistics company delivering small satellite missions from initial concept through completed mission. We are looking for aerospace, mechanical or electrical engineering interns with a passion for space exploration. Interns will be contributing to the design of small spacecraft missions and development of model-based systems engineering tools and methods for small spacecraft systems, collecting data on commercially available small satellite components and systems, and helping generate marketing content for the company. This is a challenging position and will provide valuable experience in the entrepreneurial space industry.
